

## Prevention is the Best Form of Defense

Lots of cyber security solutions can tell you when a breach or attack has taken place and data has been lost. BlackFog stops it from happening in the first place.

Filling the gap between security solutions that focus on preventing access through intrusion detection systems, such as Firewalls and Anti-Virus / Malware solutions that remove known infections after they have been discovered, BlackFog consists of 12 layers of defense against ransomware, spyware, malware, phishing, unauthorized data collection and profiling.

## Benefits

- Detects and blocks the transfer of this data in real-time, preventing attacks before they happen
- Blocks more than 99% of web advertising
- Blocks outbound data flow while keeping all data on the device
- Blocks more than 24 million threats

## Benefits

- Offers lightweight protection that doesn't slow down your devices or employee's productivity
- Easy to use centralized management console
- Works alongside existing security and AntiVirus solutions
- Managed Service Provider Ready
- Integrates with Ticketing and SIEM solutions

## Platforms

Windows 7+

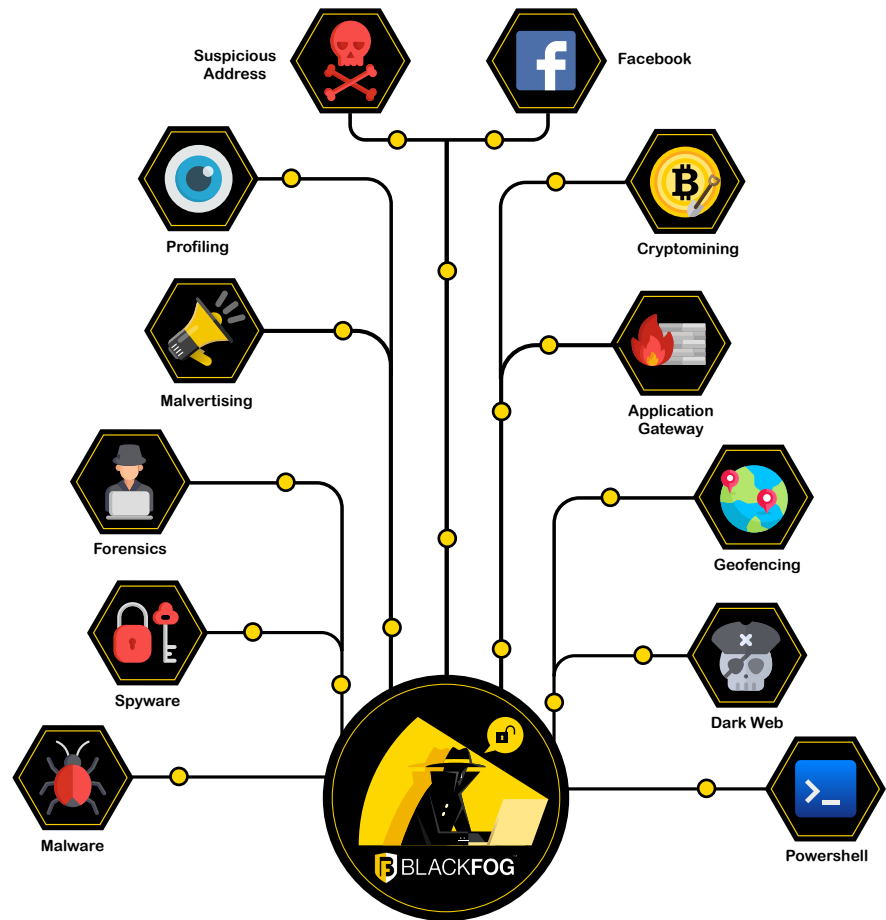

MacOS 10.11.5+

iOS 10.3+

Android 5.0+

## BlackFog's 12 Layers of Defense

## About BlackFog

Founded in 2015, BlackFog was born to combat the growing number of online threats targeting your personal and corporate data. Hackers will get into your network; BlackFog stops them getting out. Through a layered approach to security, BlackFog spots, in real-time, when an attacker is trying to remove unauthorized data from your device / network and stops them in their tracks.

Consisting of multiple layers of defense against ransomware, spyware, malware, phishing, unauthorized data collection and profiling, BlackFog blocks over 24 million threats across mobile and desktop endpoints around the world, protecting organizations' data and privacy, and strengthening their GDPR compliance.
