

DATASHEET

ADX Agility

Centralized Customer Management And Reporting For Providers

As a trusted advisor, your customers depend on you to keep their data secure. With **ADX Agility**, you can rely on a multi-layered solution that stops ransomware, spyware, malware, phishing, and unauthorized data exfiltration, **protecting both your clients and your reputation.**

Your Customers Deserve The Best Protection

As the leader in anti data exfiltration (ADX), we go beyond managing threats. Instead of relying on perimeter defenses, **ADX Agility** takes a preventative approach by blocking data exfiltration at the source. Purpose-built for Managed Service Providers, **ADX Agility** stops threats before they disrupt customer operations and dramatically reduces the risk of ransomware or data breaches.

Anti Data Exfiltration

Prevent cyberattacks across all endpoints and monitor data exfiltration from any network to ensure compliance with global privacy and data protection regulations.

Traditional Approaches Are Losing The War On Ransomware

As cyberattacks and ransomware grow more sophisticated, traditional defenses like AntiVirus and EDR/XDR can't stop advanced threats such as fileless or polymorphic attacks.

ADX Agility takes a different approach, neutralizing threats at every stage of their lifecycle, from replication to communication and exfiltration. By blocking attacks at the source, **ADX Agility** prevents lateral movement and eliminates the damage before it begins.

With the average cost of a **data privacy breach** now exceeding **\$4.44 million**, prevention has never been more critical.

Secure Your Clients' Most Valuable Data

Today's ransomware attacks focus on data exfiltration and extortion, leading to costly and damaging breaches. As the guardian of your customers' most valuable asset, their data, preventing unauthorized data exfiltration has never been more critical. With **ADX Agility**, you can deliver 24/7 protection that ensures no unauthorized data ever leaves your customers' devices.

Key Benefits: **ADX Agility** reduces the risk of data loss and breaches caused by external attacks, insider threats, and industrial espionage.

AI Threat Prevention

Fight back against the latest generation of AI based attacks. Our zero trust, zero-day AI algorithms are trained to pick up threats that haven't even been invented yet.

SOC 2 Certified

BlackFog understands the demands of today's complex regulatory environment. We've invested heavily in compliance and are certified as a SOC 2 platform. This certification provides assurance that BlackFog not only follows industry best practices, but also has the processes in place to safeguard your data.

On-Device Protection

- Mitigate the risk of data loss through geofencing
- Minimize data collection on every endpoint
- Prevent unauthorized data collection and profiling
- Anonymize user behavior
- Protect your customers remote employees wherever they are

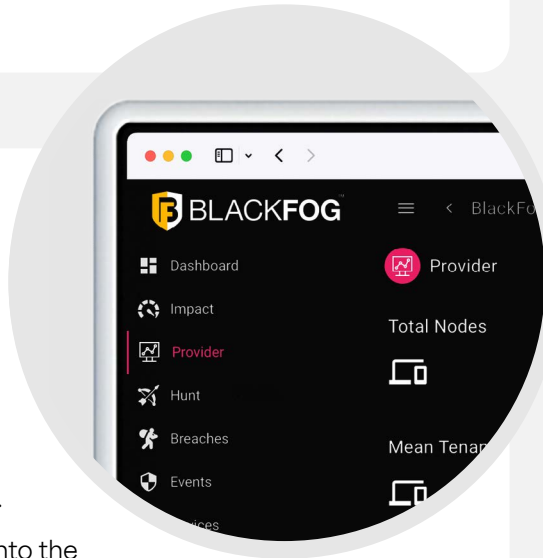

Value Added Services

- Provide monthly threat reporting and analysis
- Data retention (up to two years)
- Threat hunting capabilities
- CISO as a Service
- Device auditing capabilities

BlackFog Console

ADX Agility consists of endpoint agents and the BlackFog console. The console allows you to manage all customer devices and access a centralized view of all threats and events generated at the endpoint.

- The console provides insights into the origin of threats with a consolidated view across all customers, while each customer receives access to a threat dashboard for their business.
- Monitor each customer by logical group and filter events and devices in the master view.
- Global settings and cloning provide rapid on-boarding.
- Analytics provide detailed impact assessments across your customers networks and devices.

Ransomware Prevention

Protect your customers' intellectual property from ransomware, insider threats, and industrial espionage, while preventing malicious activity across their organizations.

About BlackFog

BlackFog is a global cybersecurity company pioneering on-device anti data exfiltration (ADX) technology. Its AI platform preemptively stops hackers from exploiting vulnerabilities in enterprise security systems, preventing ransomware, spyware, malware, phishing, and unauthorized data collection and profiling. It effectively mitigates the risks associated with data breaches and insider threats.
